

amaryllis

*This bulb is a living organism!
For best results start this kit immediately.*

INCLUDES:

- Glass Vase
- Amaryllis Bulb
- Recycled Glass
Grow Medium

GROWING GUIDE:

1. Remove all contents from vase.
 2. Rinse grow medium to clean off dust, then pour it into vase.
 3. Add ½ cup water.
 4. Remove bulb from burlap sack and place on top of grow medium with tip up. Anchor bulb in vase by arranging grow medium around it. Water level should be well below bulb — if bulb sits directly in water it will rot.
 5. Place vase in cool spot and away from light (50°-60°F is ideal).
 6. Once roots are established and grip grow medium, move vase to a sunny window. (This will take around two weeks.)
- If roots haven't started growing in 10-12 days, place vase in fridge until they do. (This may take up to 5 days.)
 - Monitor water level. Top off as needed but do not exceed 1" from the base of the vase.
 - Rotate the vase in window regularly to keep stalks straight.
