## UNPACK

### 1. Settle In

Carefully remove the packaging.

Give your plants a few days before repotting to adjust to their new environment—see details on back.

### 2. Let Light Shine

Depending on your plant selection, set in a sunny south/west window. Herbs prefer indirect light for the acclimation period so east/west windows are best.

### 3. Get Growing

Select a home for your new plant friends—a pot/planter and with or without a grow light.

When repotting, carefully remove plants from their pots. You can bend the shipping pot a little to get your plant out. Be mindful not to disrupt the roots.

## SUN SEEKERS

Assorted Succulent 6PK

---

### First 7 Days

- Allow 2-3 days to acclimate to your home before repotting. Set in a sunny window. Refrain from watering for a couple of days to let the roots dry out.
- Now you're free to repot! To transplant, carefully remove from pots and be mindful not to disrupt the roots.

### Light

Sunlight: full sun; south/west window  
MS Grow Light: high light; 8-12 hours on

### Water

Allow soil to dry fully between waterings. Water every 10-15 days or as needed. Water less in winter months. Fertilize to encourage growth.

### Soil

Pair with free-draining soil to prevent root rot or add perlite, sand and rocks into potting soil for increased drainage.

## TROPICS TOUR

Assorted Tropical Houseplant Trio

---

### First 7 Days

- Allow 3-5 days to acclimate to your home before repotting. Water plants on day 2. Gently wipe off leaves to remove dust and help your plants absorb sunlight. Set in a sunny window.
- Transplant by carefully removing from pots. Be mindful not to disrupt the roots.

### Light

Sunlight: partial shade, ambient lighting  
MS Grow Light: med light; 6-8 hours on

### Water

Touch just beneath the soil weekly and water if dry. Drooping/falling leaves are a sign to water. Fertilize to encourage growth.

### Soil

Pair with organic potting soil. Add coco coir for moisture retention and aeration. If soil compacts, repot in 6-12 months.

## ARTISAN HERBS

Assorted Herb Trio

---

### First 7 Days

- Allow 3-5 days to acclimate to your home before repotting. Water if the soil feels dry to the touch. Set in indirect light. After a few days, they will be ready for direct/med-high light.
- Transplant by carefully removing from pots. Be mindful not to disrupt the roots. Herbs may drop a few leaves, but they will rebound in 7-10 days!

### Light

Sunlight: partial sun; east/west window  
MS Grow Light: med-high light; 8-10 hours on

### Water

Touch just beneath the surface of the soil daily and water if dry. Fertilize every third watering.

### Soil

Pair with organic potting soil. Add coco coir for moisture retention and perlite for aeration. Add compost to soil blend for a nutrient boost.

Every plant environment is different. Use these guidelines to get you started and modify the watering schedule if needed.
